Editor's Note

The plant collections placed in the Herbarium of Everglades National Park have increased in the years since the second edition of this listing (1983). Many plants, listed but not previously represented in the Herbarium, have been collected. Since, over one hundred collections and sight records of plants previously unlisted have been made, it seemed an appropriate time to revise the List. The new additions, consisting of 6 ferns, 32 monocots, and 49 dicots, are denoted by a marginal "A", with 15 additions to the Addenda not so denoted. In addition, over 50 plants, cited, from various sources, as being present in the Park have been reviewed and rejected, some reluctantly, usually for insufficient evidence. Those additions, seen by reliable observers, but which are not represented by Herbarium specimens, continue to be designated by an asterisk "*". Exotic plants continue to be newly found in the Park and are designated by the notation "E", though with an expanded base of reference.

Rhipsalis baccifera has been refound in the Park; **Oncidium carthagagenense** probably was never in the Park and has been delisted. A listing of a number of plants not collected or seen in many years has been provided in Addendum 6 for the convenience of the interested reader. Plants listed in Addendum 1 have also been listed in the main body of the List; Addendum 1 has been retained for the reader's convenience. The common names of the plant families have been added to the list; both the common and scientific names have been added to the indices. The number of common names has been increased and indexed. Synonymy has generally been limited to one synonym (usually the name listed in Long & Lakela or previous editions of this List). The synonyms have, however, been indexed separately. Subspecific names have been dropped from the index. Recent nomenclatural changes have been utilized if generally available in the reference material of the ENP Herbarium.

The editor thanks Dr. William B. Robertson Jr., one of the founders of the ENP Herbarium, who first encouraged the editor to collect plants for the ENP Herbarium.

The editor has benefitted greatly from discussions on nomenclature with David Jones, Alan Herndon, and Rick Seavey. Both Rick Seavey and Roger Hammer provided helpful suggestions to improve the listing.

The editor thanks Dr. Jack Fisher of Fairchild Tropical Garden for permission to use the research facilities; Dr. E.L. Bridges for assistance in searching the FTG herbarium; Barbara Smith for help in using the FTG library; Carol Lippincott and Dena Garvue for permitting the editor to clutter their office while consulting the extensive field notes of the late George N. Avery.

With the publication of R. P. Wunderlin's Guide to the Vascular Plants of Florida (1998), it seemed appropriate to update the nomenclature of this Checklist. Species not listed in Wunderlin are marked with a "W". Ten new additions to the Checklist are marked with an "A"; the 1996 additions are no longer marked. Names cited in parentheses are for reference and do not necessarily indicate synonymy.

Thanks to the staff of the South Florida Natural Resources Center for assistance during this revision. David Jones is always particularly helpful.

Thanks, again, to the staff of the research facilities of Fairchild Tropical Garden. The herbarium, library, and archived materials are an essential resource for anyone investigating the unique flora of South Florida.

PLANTS OF EVERGLADES NATIONAL PARK

A Checklist of Vascular Plants

Introduction

This list is based upon specimens in the herbarium of Everglades National Park, located at the South Florida Research Center. Species which have been seen by the authors in Everglades National Park (ENP), but which are not currently represented by specimens from Everglades in the ENP herbarium, are designated by an asterisk (*). The list includes plant taxa occurring within the boundaries of ENP which are native or naturalized in South Florida. Naturalized exotic plant species are preceded by the letter "E." Because of the difficulty of determining which weedy species are non-native, only those which are almost certainly exotic (based largely on range information given in Long and Lakela's *Flora of Tropical Florida* (1976 edition), in Adams' *Flowering Plants of Jamaica*, or in Hitchcock and Chase's *Manual of the Grasses of the United States*) are so designated. Species occurring currently in cultivation or persisting locally from past cultivation are not included, except for certain formerly cultivated species for which specimens exist in the ENP herbarium and which may persist in several locations (preceded by the letter "C"). Additional information regarding the flora of Key Largo Ranger Station and regarding cultivated exotic species occurring in specific localities is included in the addenda.

Species are included if they have been collected in Everglades National Park even though they may have been extirpated. Species which have apparently disappeared from the flora of ENP include: *Brassia caudata*, *Macradenia lutescens*, *Oncidium carthaginense*, *Ophioglossum palmatum*, and *Rhipsalis baccifera*.

In order to facilitate use of this list with Long and Lakela's *Flora of Tropical Florida*, the name used by Long and Lakela is given in parentheses following our name in instances where our nomenclature diverges from that of their *Flora*. Species found in ENP which are not included in Long and Lakela are indicated with the letter "X."

Acknowledgements

We acknowledge the crucial contribution of all those who have contributed to the herbarium of Everglades National Park during the past 25 years. Dr. F. C. Craighead, Sr., the most prolific contributor, deserves special mention. We wish to thank Dottie Anderson for particularly careful typing of this manuscript. Lois Granskog provided a useful review.
